

TheBarcode Package and Pricing Matrix

Commercial packaging, feature entitlements, and third party charges

Decision Build the package model now, before adding customer-facing billing controls. Keep one product and one data model; enforce package differences through entitlements, limits, and deployment choices rather than copied applications.

Scope This matrix is a launch recommendation for TheBarcode. Prices are proposed Kenyan shilling starting points, not final quotations. Hardware, payment providers, tax integrations, messaging providers, and custom services are priced separately where their costs vary by provider or usage.

Recommended packages

Package	Launch price	Best fit	Included operating scope	Guardrails and upgrade path
Lite	KES 499 / month KES 4,990 / year	Solo shops and pilots	Local-first SQLite; one business; one device; offline POS, inventory, customers, receipts, expenses, basic reports	Not multi-tenant; no shared multi-terminal database; upgrade path preserves data through migration
Connect	KES 2,490 / month	One outlet with several staff or terminals	Shared PostgreSQL data; multiple terminals; roles; credit customers; expenses; suppliers; stocktakes; audit trail; PDF and spreadsheet reports	One business or outlet; branch and terminal limits apply
Growth	KES 5,490 / month	Growing retail, hospitality, bakery, or production business	Connect plus recipes and production, costing, purchasing, approvals, accounting, Smart Insights, online backup and up to three branches	Usage limits and included support level are defined in the order form
Enterprise	From KES 12,500 / month	Groups, chains, hotels, and multi-branch operators	Multi-tenant cloud, unlimited or negotiated branches and terminals, central reporting, API, integrations, advanced permissions, onboarding, SLA and priority support	Custom scope, data residency, integrations, and service levels are quoted

Feature entitlement matrix

A check mark means the capability is included in the package. Add-on means it can be purchased without changing the core plan. Limits should be enforced by the API, not only hidden in the user interface.

Capability	Lite	Connect	Growth	Enterprise
Sales and POS	Included	Included	Included	Included
Offline-first operation	SQLite on one device	Local queue with shared database	Local queue with shared database	Managed sync and resilience
Receipt printing	USB/Bluetooth thermal	USB/Bluetooth thermal	USB/Bluetooth thermal	Central printer policies
Inventory, units and variants	Included	Included	Included	Included
Low-stock and reorder signals	Basic	Included	Forecasting and Smart Insights	Centralized alerts
Customers and credit control	Basic customer ledger	Credit limits and approvals	Collections insights	Group-wide customer controls

Capability	Lite	Connect	Growth	Enterprise
Expenses and suppliers	Basic	Included	Purchasing and approvals	Central procurement
Staff, roles and audit trail	Basic owner controls	Included	Delegated permissions	Advanced policy controls
Stocktakes and adjustments	Included	Included	Transfers and approvals	Multi-branch controls
Recipes and production	Not included	Add-on	Included	Included
Accounting and ledgers	Not included	Add-on	Included	Included with consolidation
Reports and PDF exports	Basic	Operational	Advanced and scheduled	Central and custom
Smart Insights	Rule-based basics	Rule-based basics	Included; optional LLM key	Included; governed AI integrations
Multi-terminal shared data	Not included	Included	Included	Included
Multi-branch and tenant isolation	Not included	Not included	Up to three branches	Included
Backups and restore	Local backup	Managed backup option	Online backup and restore	Policy-managed retention
API and integrations	Not included	Add-on	Selected integrations	Included and custom

Proposed separate charges

These charges keep variable third-party or service costs transparent. Where a provider charges per message, transaction, device, or tax filing, pass the provider charge through separately and show it on the customer invoice.

Charge	Proposed price	What it covers
Onboarding and data migration	KES 5,000 to 25,000	Data cleanup, import, staff setup, opening balances, and acceptance testing
Hardware and printer setup	Quoted	Printer, scanner, cash drawer, cabling, driver installation, and on-site setup
Extra terminal	KES 500 to 1,000 / month	Only for plans that support shared terminals; final price depends on support and device policy
Extra branch	KES 1,500 to 3,000 / month	For Connect or Growth where an additional outlet is outside the included limit
M-Pesa or payment automation	Setup plus provider fees	API credentials, callbacks, reconciliation, and any transaction charges
eTIMS or tax integration	Setup plus provider or filing fees	Country-specific tax service, certification, and maintenance
WhatsApp summaries	Provider message fees plus service fee	Template approval, message delivery, and designated-number configuration
Custom integration or API work	From KES 15,000	Scope, testing, documentation, and maintenance quoted separately

Charge	Proposed price	What it covers
Training or on-site support	From KES 5,000 / day	Travel and extended support quoted separately
Annual prepayment	15 to 20 percent discount	Applies to eligible subscription fees; third-party charges remain pass-through

How one codebase serves different packages

- Registration stores the selected plan, business industry, branch and terminal limits, trial period, billing status, and enabled modules for the institution.
- The API is the source of truth for entitlements. Every protected action checks the module and limit before it writes data; the UI only reflects that decision and should never be the security boundary.
- A downgrade does not delete historical data. It prevents new use of restricted capabilities, preserves existing records, and keeps an upgrade path available.
- Lite remains a local SQLite product. Connect, Growth, and Enterprise use the same domain model with shared PostgreSQL and institution-scoped data. A tested migration converts Lite data into the shared model after backup and validation.
- Package changes are auditable. Owners can see the plan, module state, billing state, effective date, limits, and the user or service that changed them.

Build sequence

When	Workstream	Outcome
Now	Catalog and entitlement foundation	Plan codes, module registry, limits, institution settings, registration selection, trial and expiry states, and audit events.
Next	Customer self-service and billing adapter	Payment status callback, renewal grace period, receipts for subscriptions, and admin override without reinstalling the app.
Later	Provider integrations	M-Pesa automation, eTIMS, WhatsApp, accounting export, and domain-specific connectors behind add-on entitlements.
Always	Data safety	Backups before migrations, no destructive downgrade, clear export path, and versioned database migrations.

Market context

The proposed prices sit between local entry POS products and higher-touch multi-branch systems. Public Kenyan examples show entry plans around KES 300 to 1,500 per month, growing plans around KES 2,000 to 6,800, and enterprise or managed offerings from roughly KES 12,750. International products such as Loyverse use a free core with paid add-ons. Validate willingness to pay with five to ten pilot businesses before locking the catalogue.

Kiosk.ke: <https://kiosk.ke/> (Kenyan POS plan reference)

Bizflow: <https://www.bizflow.ke/pricing> (Kenyan operations pricing reference)

UZAHub: <https://www.uzahub.app/> (Kenyan retail and business platform reference)

Tilloza: <https://tilloza.com/> (Kenyan POS pricing reference)

Maamul: <https://www.maamul.com/> (Kenyan managed business platform reference)

Loyverse: <https://loyverse.com/en-us/pricing> (International free-core and add-on model)

Owner decision requested Approve the four-plan structure and the entitlement fields first. Then implement the registration and module-gating foundation while the current local product remains fully usable. Payment collection can be plugged in later without redesigning the data model.
